

# *High space utilisation*

with ideal dimensions

**IRIOS and IVANDO Refrigerated and Freezer Islands**

*Linde*

# *Sales generator*

with excellent merchandise display

## The perfect stage for your products

Irios and Ivando attract your customers noticeably. Large sized glass panels provide an outstandingly clear view of the abundance of products even from a great distance. Your assortment of merchandise is shown to its best advantage. The ideal dimensions of the islands make the most of your floor space. Irios and Ivando refrigerated and freezer islands are the optimum sales generators for your market.

The Irios is well suited for presenting products from homogenous temperature classes.

The Ivando enables you to display refrigerated and frozen foods in one island. Two units can be set up either directly next to each other or further apart to thus build around obstacles such as columns, beams, or other structural elements.

Both islands can of course be expanded by installing crown end cabinets to again increase sales considerably.

### Benefits for your business

- ▶ Ideal dimensions
- ▶ Low energy consumption
- ▶ Exclusive appearance
- ▶ Attractive merchandise display
- ▶ Highly forceful display appeal
- ▶ High floor space utilisation

# 90-40-85...

ideal measurements

## We have been taking measurements

The ideal measurements of the Irios and Ivando are of course no coincidence. The height of a freezer island should be 90 cm to enable customers to easily bend over the island and reach for merchandise. A 40 cm stacking height has proven to be the ideal dimension to maintain the correct temperature. The inside dimensions were determined after extensive dialogue with the retail trade and the food industry. Based on the information gained, we have determined that 85 cm is the system dimension in which all normal packaging formats can be optimally accommodated. Regardless of your product assortment or whatever you have in mind – from meat to vegetables and pizza, from fish to ice cream – it's all in the Irios and Ivando.

*Cross-Merchandising*  
Irios with top-mounted shelves

*The ideal combination:  
High space utilization -  
low energy consumption.*

## Ideally low energy consumption

The Irios and Ivando increase sales considerably and at the same time decrease the electric power for defrosting 30%. Our principle of defrosting makes it possible. During defrosting, the heating rods, installed in the centre of the condensers of these islands, transfer the heat to the condenser without dissipation.

## Special tandem condenser

The tandem condenser in the Irios developed by Linde supplies cold air to the display compartment. It is comprised of two units to reliably ensure that constant temperatures are maintained. Since both units use the same expansion valve, the Irios is especially easy to service.
